the application of quality assurance qa techniques has led to major improvements in the

quality of many products and services fortunately these techniques have been well documented in the form of guides and standards and nowhere more so than in the area of measurement and testing particularly chemical analysis training of analysts and potential analysts in quality assurance techniques is a major task for universities and industrial and government laboratories re training is also necessary since the quest for improvements in quality seems to be never ending the purpose of this book is to provide training material in the convenient form of powerpoint slides with notes giving further details on the contents of the slides experts in the relevant topic who have direct experience of lecturing on or utilising its contents have written each chapter almost every aspect of qa is covered from basic fundamentals such as statistics uncertainty and traceability which are applicable to all types of measurement through specific guidance on method validation use of reference materials and control charts these are all set in the context of total quality management certification and accreditation each chapter is intended to be self contained and inevitably this leads to some duplication and cross references are given if there is more detailed treatment in other chapters

the issue of quality assurance in the analytical chemistry laboratory has become of great importance in recent years quality assurance in analytical chemistry introduces the reader to the whole concept of quality assurance it discusses how all aspects of chemical analysis from sampling and method selection to choice of equipment and the taking and reporting of measurements affect the quality of analytical data finally the implementation and use of quality systems are covered

xii a second edition might be in order and readily agreed although the basic principles remain the same discussions with analysts laboratory supervisors and managers indicated many areas where improvements could be made for example new chapters have been added on sampling and quality assurance laboratory facilities and quality assurance and auditing for quality assurance very little of the first edition has been discarded but many topics have been expanded considerably the chapter on computers has been completely rewritten in view of the rapid changes in that field the chapter in the first edition on planning and organizing for quality assurance has been split into two chapters one on planning for quality assurance and the other on organizing and establishing a quality assurance program and new material on mandated quality assurance programs has been combined with the material on laboratory accreditation numerous examples especially those involving mathematical calculations have been added at the suggestion of some readers in short this edition is very nearly a new book and i can only hope it is as well received as the first edition chapter 1 quality quality control and quality assurance one of the strongest trends in modern society is the continuing evolution from a manufacturing to a service oriented economy

w funk v dammann g donnevert quality assurance in analytical chemistry from reviews of the

german edition especially with a view to the compulsory introduction of quality assurance systems in laboratories for food examination this book will be of great interest the quality assurance of analytical methods from their development to their application in routine analysis is systematically described this book can be warmly recommended to all analysts as both a textbook and a practice oriented handbook deutsche lebensmittel rundschau it offers valuable help for the training of analysts and is unique in the german analytical literature its goal as a reference source and instruction manual for employees in laboratories and ministries with reference to the strategies of quality assurance in analytical chemistry is exemplarily fulfilled Österreichische chemiezeitschrift

analytical chemical results touch everyones lives can we eat the food do i have a disease did the defendant leave his dna at the crime scene should i invest in that gold mine when a chemist measures something how do we know that the result is appropriate what is fit for purpose in the context of analytical chemistry many manufacturing and service companies have embraced traditional statistical approaches to quality assurance and these have been adopted by analytical chemistry laboratories however the right chemical answer is never known so there is not a direct parallel with the manufacture of ball bearings which can be measured and assessed the customer of the analytical services relies on the quality assurance and quality control procedures adopted by the laboratory it is the totality of the qa effort perhaps first brought together in this text that gives the customer confidence in the result qa in the analytical chemistry laboratory takes the reader through all aspects of qa from the statistical basics and quality control tools to becoming accredited to international standards the latest understanding of concepts such as measurement uncertainty and metrological traceability are explained for a working chemist or her client how to design experiments to optimize an analytical process is included together with the necessary statistics to analyze the results all numerical manipulation and examples are given as microsoft excel spreadsheets that can be implemented on any personal computer different kinds of interlaboratory studies are explained and how a laboratory is judged in proficiency testing schemes is described accreditation to iso 17025 or oecd glp is nearly obligatory for laboratories of any pretension to quality here the reader will find an introduction to the requirements and philosophy of accreditation whether completing a degree course in chemistry or working in a busy analytical laboratory this book is a single source for an introduction into quality assurance

quality assurance and accreditation in analytical chemistry laboratories is an important issue on the national and international scale the book presents currently used methods to assure the quality of analytical results and it describes accreditation procedures for the mutual recognition of these results the book describes in detail the accreditation systems in 13 european countries and the present situation in the united states of america the editor also places high value on accreditation and certification practice and on the relevant legislation in europe the appendix lists invaluable information on important european accreditation
