building engineering is a complex and constantly evolving branch the needs of the xxi century society cause a constant change in construction industry due to the need to achieve sustainable and ecological buildings this affects all levels and phases of this engineering given this circumstance numerous researchers turn their efforts to find optimal solutions for building engineering for this reason in this book a holistic analysis of building engineering is carried out from the perspectives that have a greater weight for sustainability objectives the book is divided into 6 sections i building materials which deals with research related to the most innovative and sustainable building materials ii design and construction which deals with existing methodologies and advances in design and construction in construction sector iii building repair and maintenance which deals with building repair maintenance and upkeep techniques iv energy efficiency which analyses the latest research on the energy efficiency of buildings and their behaviour in the face of climate change v sustainability which analyses the establishment of measures to achieve a more sustainable built environment and vi construction management which compiles the latest studies in the field of project manager the 38 chapters of the book together constitute an advance for the topic of building engineering the aspects covered in the book are of great interest to various sectors such as researchers engineers architects legislators and interested parties

following the long standing tradition of fib in promoting the use of consistent design methods strut and tie models were formally incorporated in model code 1990 to serve as the design basis for discontinuity regions this choice was largely acknowledged as a sound approach for design and was thereafter followed in many national standards for model code 2010 some update and revision of the previous provisions was performed but the scope of the method was particularly broadened by introducing its complementary use with the stress field method since model code 2010 significant new knowledge has been generated in this topic particularly the use of software implementing the theoretical ground of the stress field method is becoming increasingly popular and efficient allowing for design optimisation and assessment of structures in a simple transparent and accessible manner in this bulletin the current state of the art of the strut and tie models stm and the stress field

models sfm is presented reference is not only made to classical rigid plastic solutions but also to solutions considering compatibility of deformations such as elastic plastic approaches or models allowing investigation of serviceability behaviour and deformation capacity of concrete structures it is shown in the bulletin that all models share the same ground and fundamental hypotheses their results are presented in a unitary and consistent manner by means of compression fields in the concrete and stresses in the reinforcement the consistency amongst these approaches and their potential use in practice is also explored by means of the levels of approximation loa approach as described in model code 2010 another effort in this bulletin has been devoted to provide comparisons of the solutions according to strut and tie and stress fields to tests in order to discuss on their pertinence and limitations this perspective is also completed with practical examples presented of structures actually designed with this technique and where the potential of these methods can be appreciated in a clear manner finally a number of special topics are also covered in the bulletin related to numerical optimisation verifications at serviceability states minimum reinforcement or the applicability of the methods under cyclic or reversal actions this bulletin not only aims to give state of the art rules and methods to design according to these techniques but also to provide an outlook of how these methods could be implemented in future standards this material also serves as the background document for the revision of the current provisions of model code 2010 in the new model code 2020

the quality and testing of materials used in construction are covered by reference to the appropriate astm standard specifications welding of reinforcement is covered by reference to the appropriate aws standard uses of the code include adoption by reference in general building codes and earlier editions have been widely used in this manner the code is written in a format that allows such reference without change to its language therefore background details or suggestions for carrying out the requirements or intent of the code portion cannot be included the commentary is provided for this purpose some of the considerations of the committee in developing the code portion are discussed within the commentary with emphasis given to the explanation of new or revised provisions much of the research data referenced in preparing the code is cited for the user desiring to study individual questions in greater detail other documents that provide suggestions for carrying out the requirements of the code are also cited
